bamboo

NEW

1 Highly sustainable

Bamboo is a grass, it can grow one meter in a single day! It can grow full size in 3-7 years compared to standard trees which can take 30+ years to grow.

2 Versatile and no waste

Bamboo is an amazing versatile plants and its durable fibers are used for many things including textile, building materials and medicines. Since almost every part of bamboo plant can be used, there is no waste !

3 Good for the planet

Bamboo produces 35 % more oxygen and it absorbs 2x more carbon dioxide than trees.*

4 Natural cultivation

One of the most resilient plants to disease and weed. No harsh fertilizer, pesticides or herbicides are needed to grow, and it uses very little water compared to other plants.

5 Renewable resource

The bamboo roots remain in the ground for them to expand which helps to prevent soil erosion, flooding, and massive changes to the local eco-system.
